Applied Machine Learning - Basic

Prof. Daniele Bonacorsi, Dr. Luca Clissa

Hands-on 6

Getting started with data analysis

General info recap

Lecturer: **Luca Clissa**

Material: Virtuale/CourseAMLBas2526

Office hours: Tuesdays, 4-6 pm, by appointment
(can book here: https://calendly.com/luca-clissa/office-hours)

...but feel free to **ask during classes!!**

Contact: luca.clissa2@unibo.it

Hands-on 6 outline

This hands-on deals with major steps of a data analysis pipeline:

- Exploratory Data Analysis (EDA): how to explore the content of the data
- Data cleaning: example of how working on real data looks like in practice
- Feature scaling: using scikit-learn to transform input features when needed
- Linear regression: putting all together and build a linear model
  - From scracth
  - Using scikit-learn analytical solution
  - Self-implemented gradient descent

This is also what you should do in your project!
